

Company Founded

NST Audio is officially incorporated at Companies House as a UK Limited company.

A design team with over 80 years combined experience in professional audio, work starts on a live audio product to rival the best in the business...

Frankfurt Launch of D48 & ID48

The D48 and its installation sibling launch at ProLight & Sound in Frankfurt, sharing a stand with Full Fat Audio, and also creating a relationship that sets the OEM ball rolling for creation of DSP cards for amplifiers.

The 4 input, 8 output matrix signal processor is an instant hit due to its excellent audio quality, and Ethernet control with stable intuitive remote software for Windows AND Mac.

iPad Version of D-Net Released

Even before the launch of the iPad Pro the following year, we had an iPad app that could fully control any system of D48, ID48 and DSP enabled OEM amplifiers.

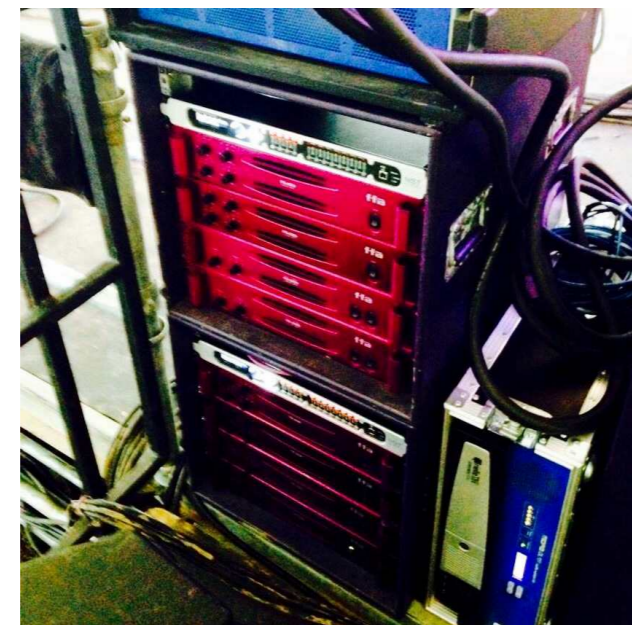

Coupled with a full Mac release to complement the Windows version, we had your remote applications covered early on!

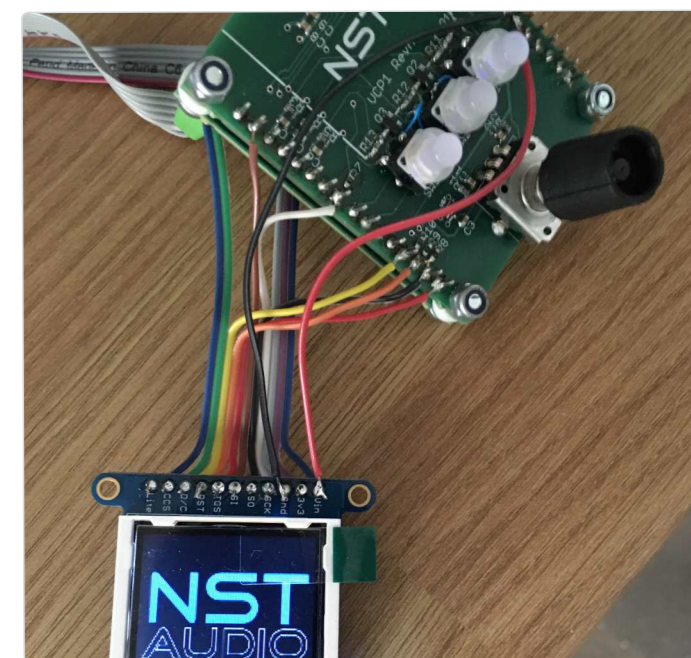

D48S Released & First Glasto!

D48S improves performance yet further with a new DSP engine meaning more power, and running at 96k for all features.

The D48 also makes its Glastonbury debut - the first of many being used throughout the many stages!

VR1 PoE Remote Launched

Initially just a research project the VR1 becomes a production model in its own right, providing simple remote control of end user functions of any NST processor.

VMX88 Matrix Processor Launched

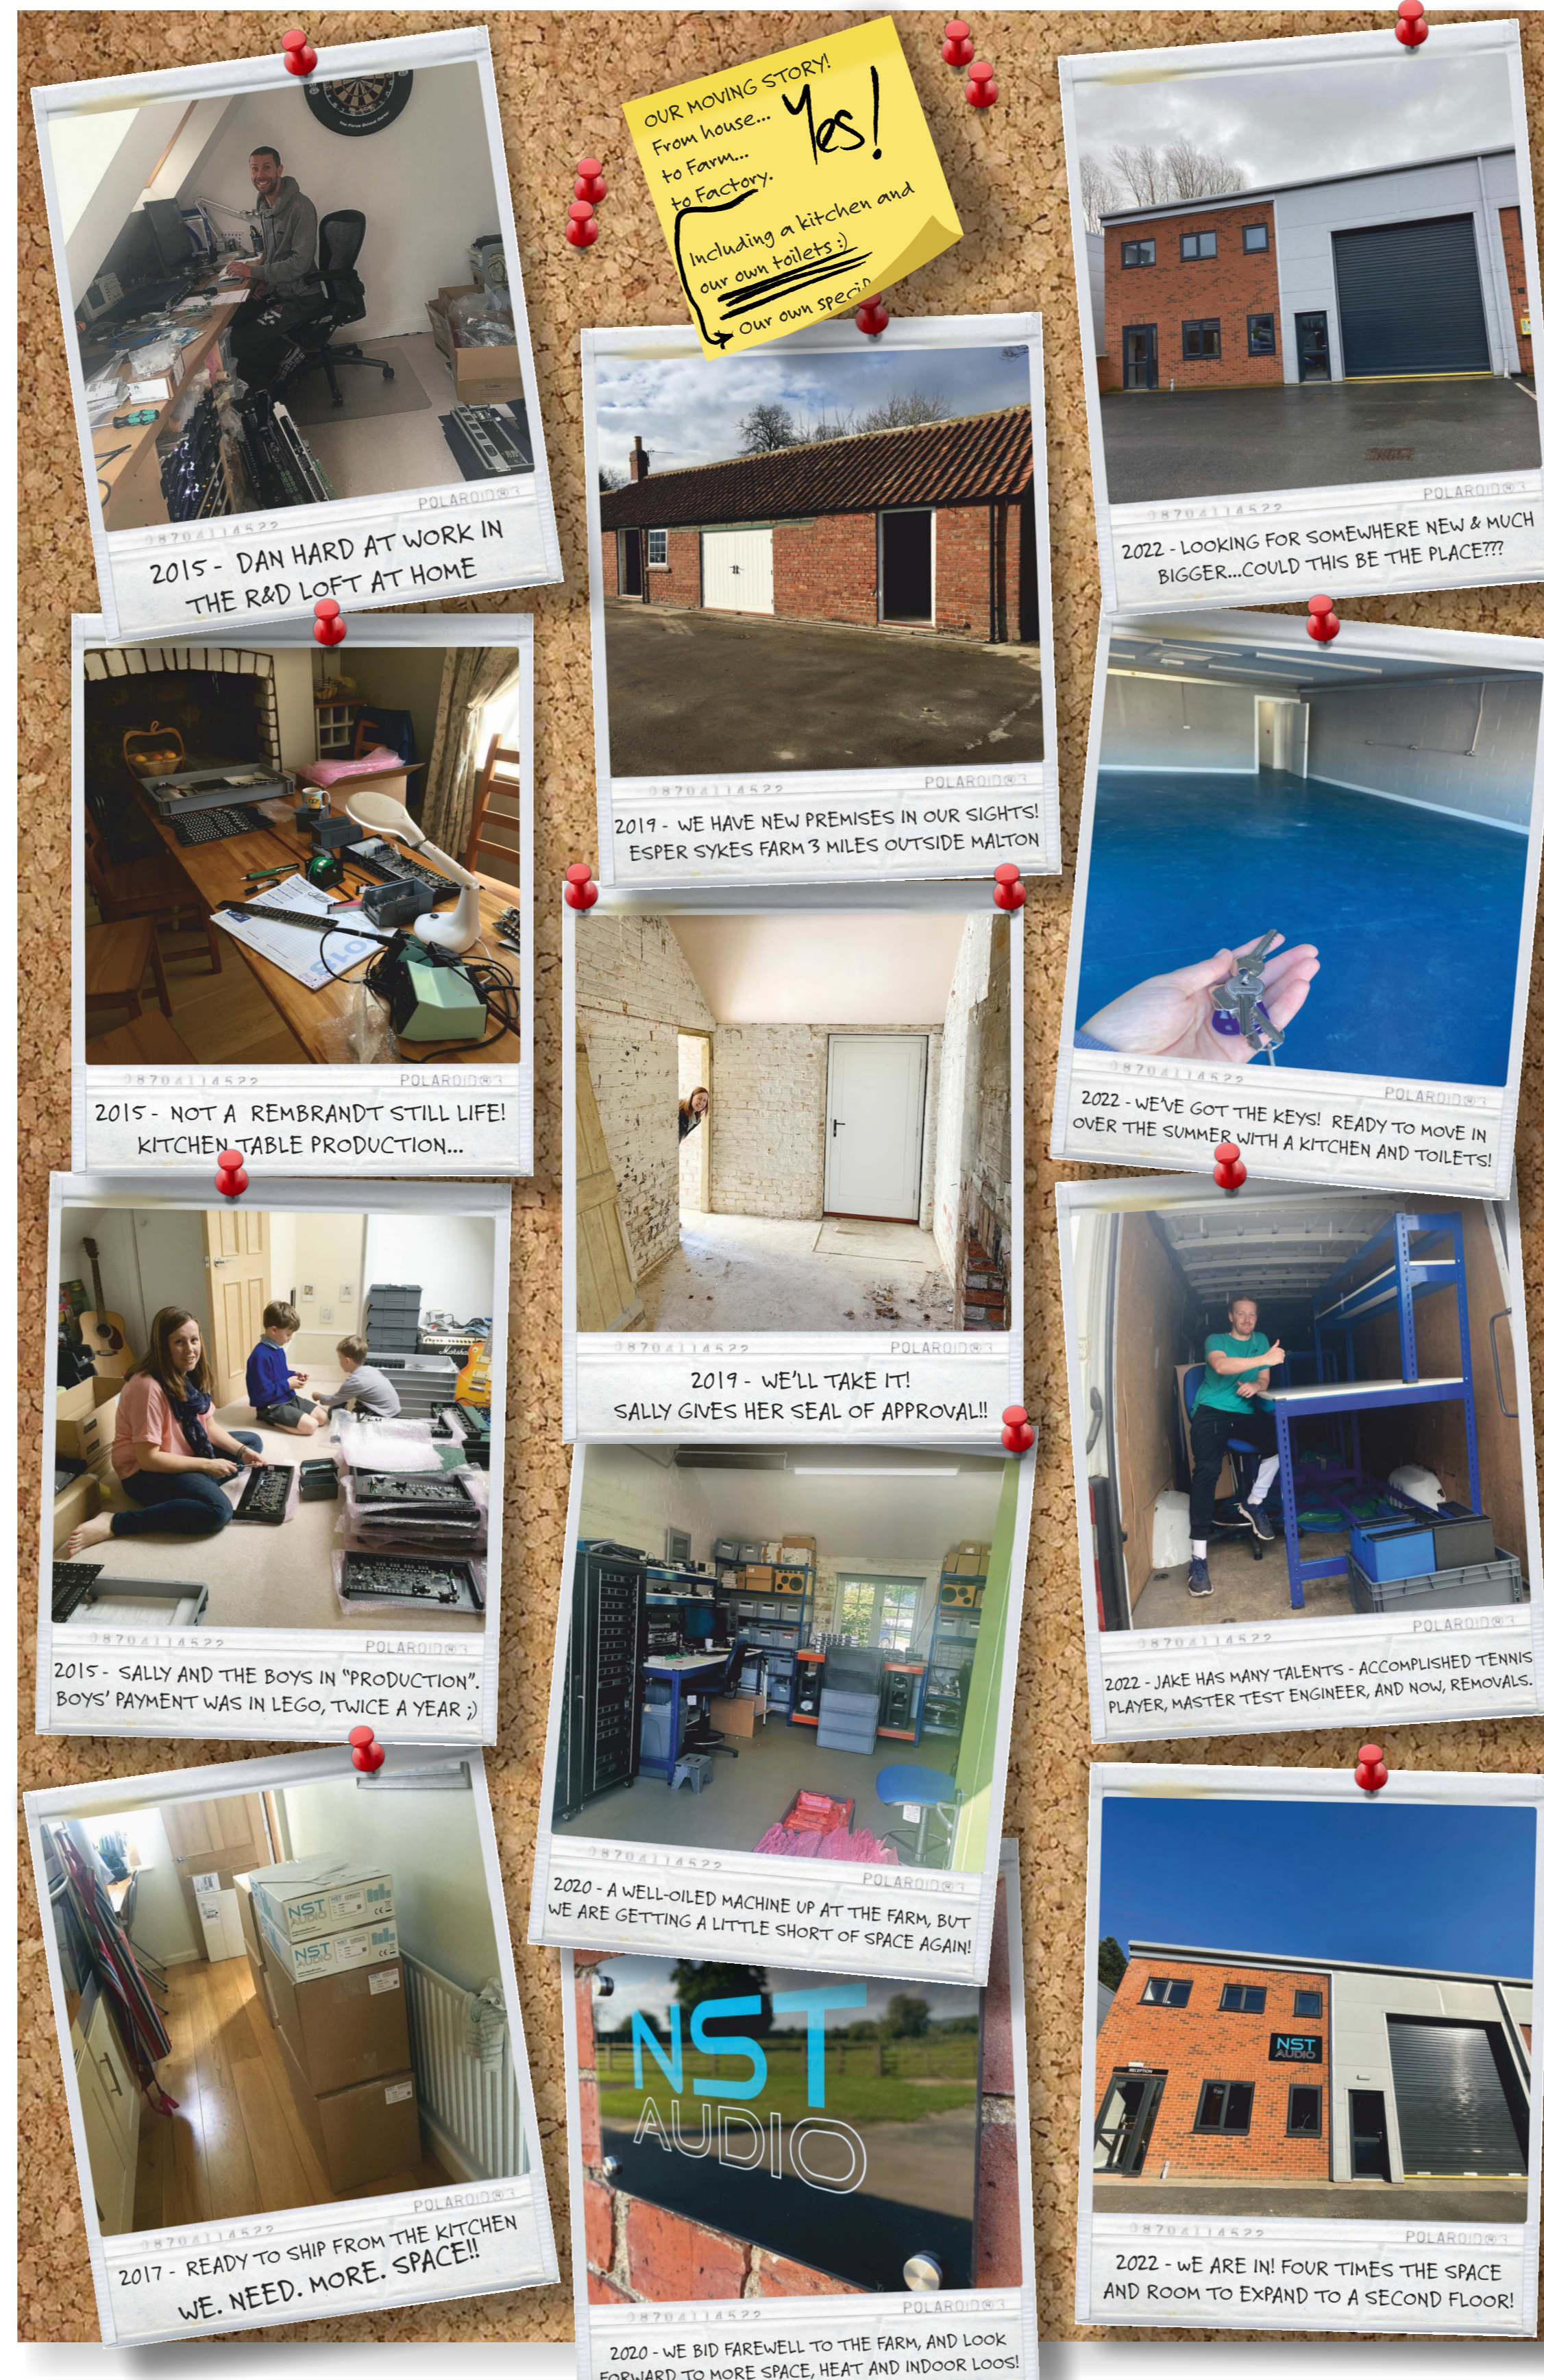

To cater for installations requiring top quality scaleable processing and was our first product to feature Dante audio networking.

With eight inputs (also made available to the Dante network) and eight outputs (also available on the network) as many devices as required can be combined and share sources and outputs.

TEN YEARS OF NST AUDIO

VM016 Matrix Processor Launched

Amsterdam, ISE 2020. We launch an output only matrix processor with 16 channels of networked audio with a full suite of DSP.

Both the VMX88 and the VM016 are both also made compatible with AES67 as well as Dante audio networks.

+

D48X & ID48X Launched

The third generation D48X and ID48X feature the latest ESS converter chipsets yielding enhanced audiophile performance, USB-C connectivity and a new dual Ethernet remote port for easier remote control. The ID48X also gets a makeover!

VMX88L Launched

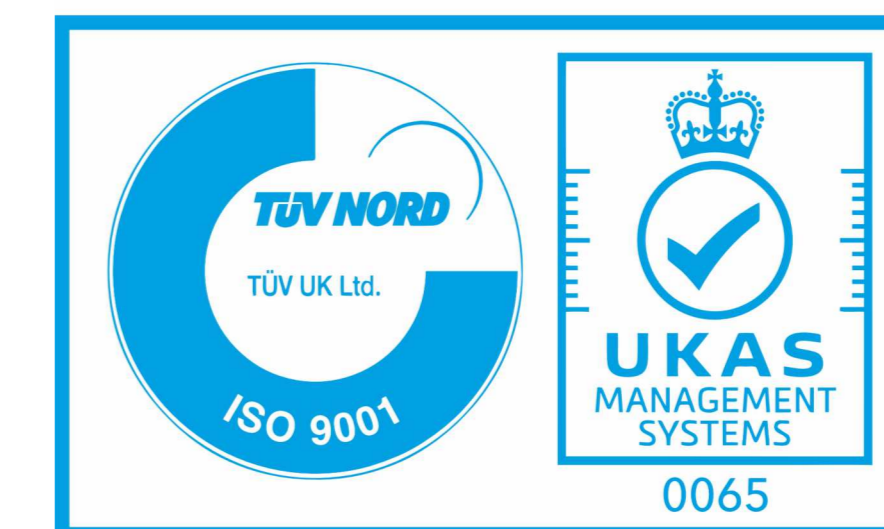

For installations that want the audio quality but not the audio network, we created the VMX88L. All the features of a standard VMX88, without the Dante.

Why pay for something you don't need and won't use?!

Awarded ISO 9001:2015

ISO 9001: 2015
GB02037

Very proud to announce to have been ISO 9001:2015 certification.

Special thanks are due to Jake and Holly who have done a lot of the work to make it happen.

This is a big deal for us because it's part of the commitment by all of us at NST to monitor and improve the quality of everything we do.

VR2 PoE Touch Remote Launched

We launch our next generation of Venue Remote - the VR2.

Featuring programmable bezel lighting, a clock and calendar for event scheduling, user levels and groups, and even control of 3rd party equipment, it's an elegant adaptable addition to our remote control options.

What's coming next?!

As ISE celebrates 20 years since the first exhibition in Geneva in 2004, we both look forward to many more years of exciting, innovative audio developments.

If you've read this far, ask us about what's coming next!

Thanks for all your support so far!
